NORCAT

The inhalation of toxic materials is perhaps the greatest risk and greatest concern of any worker. That is why it is essential that a person's respiratory system be protected from these chemicals.

This program discusses the following:

- The two main types of respirators
- Things to look for when performing an inspection
- Fit-testing and fit-checks
- Physiological and psychological limitations of wearing a respirator
- Types of filters and cartridges
- Warning properties
- Respirator cleaning, disinfection and storage.
